My Basic Network Scan

Report generated by Nessus™ Sun, 04 Jul 2021 15:04:23 EDT

TABLE OF CONTENTS

Vulnerabilities by Host

Vulnerabilities by Host

18.168.216.191

CRITICAL	HIGH	MEDIUM	LOW	INFO
0	0	1	1	19

Scan Information

Start time: Sun Jul 4 14:42:07 2021

End time: Sun Jul 4 15:04:23 2021

Host Information

DNS Name: ec2-18-168-216-191.eu-west-2.compute.amazonaws.com

IP: 18.168.216.191

OS: EthernetBoard OkiLAN 8100e

Vulnerabilities

10756 - Apple Mac OS X Find-By-Content .DS_Store Web Directory Listing

Synopsis

It is possible to get the list of files present in the remote directory.

Description

It is possible to read a '.DS_Store' file on the remote web server.

This file is created by MacOS X Finder; it is used to remember the icons position on the desktop, among other things, and contains the list of files and directories present in the remote directory.

Note that deleted files may still be present in this .DS_Store file.

See Also

https://support.apple.com/en-us/HT1629

https://helpx.adobe.com/dreamweaver/kb/remove-ds-store-files-mac.html

http://www.greci.cc/?p=10

Solution

- Configure your web server so as to prevent the download of .DS_Store files

- Mac OS X users should configure their workstation to disable the creation of .DS_Store files on network shares.

Risk Factor

tcp/80/www

```
http://ec2-18-168-216-191.eu-west-2.compute.amazonaws.com/.DS_Store
reveals the following entries:
 assets
```

70658 - SSH Server CBC Mode Ciphers Enabled

Synopsis

The SSH server is configured to use Cipher Block Chaining.

Description

The SSH server is configured to support Cipher Block Chaining (CBC) encryption. This may allow an attacker to recover the plaintext message from the ciphertext.

Note that this plugin only checks for the options of the SSH server and does not check for vulnerable software versions.

Solution

Contact the vendor or consult product documentation to disable CBC mode cipher encryption, and enable CTR or GCM cipher mode encryption.

Risk Factor

Low

Plugin Output

tcp/22/ssh

```
The following client-to-server Cipher Block Chaining (CBC) algorithms
are supported :
```

```
  3des-cbc
  aes128-cbc
  aes192-cbc
  aes256-cbc
  blowfish-cbc
  cast128-cbc

The following server-to-client Cipher Block Chaining (CBC) algorithms
are supported :

  3des-cbc
  aes128-cbc
  aes192-cbc
  aes256-cbc
  blowfish-cbc
  cast128-cbc
```

48204 - Apache HTTP Server Version

Synopsis

It is possible to obtain the version number of the remote Apache HTTP server.

Description

The remote host is running the Apache HTTP Server, an open source web server. It was possible to read the version number from the banner.

Plugin Output

tcp/80/www

```
URL        : http://ec2-18-168-216-191.eu-west-2.compute.amazonaws.com/
Version    : unknown
backported : 0
```

39520 - Backported Security Patch Detection (SSH)

Synopsis

Security patches are backported.

Description

Security patches may have been 'backported' to the remote SSH server without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

```

45590 - Common Platform Enumeration (CPE)

Synopsis

It was possible to enumerate CPE names that matched on the remote system.

Description

By using information obtained from a Nessus scan, this plugin reports CPE (Common Platform Enumeration) matches for various hardware and software products found on a host.

Note that if an official CPE is not available for the product, this plugin computes the best possible CPE based on the information available from the scan.

117886 - Local Checks Not Enabled (info)

Synopsis

Local checks were not enabled.

Description

Nessus did not enable local checks on the remote host. This does not necessarily indicate a problem with the scan. Credentials may not have been provided, local checks may not be available for the target, the target may not have been identified, or another issue may have occurred that prevented local checks from being enabled. See plugin output for details.

This plugin reports informational findings related to local checks not being enabled. For failure information, see plugin 21745 :

'Authentication Failure - Local Checks Not Run'.

    Plugin Name : Target Credential Status by Authentication Protocol - No Credentials Provided
    Message     :
Credentials were not provided for detected SSH service.
```

11219 - Nessus SYN scanner

Synopsis

It is possible to determine which TCP ports are open.

Description

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

Solution

Protect your target with an IP filter.

Risk Factor

None

Plugin Information

Published: 2009/02/04, Modified: 2021/04/20

Plugin Output

tcp/22/ssh

```
Port 22/tcp was found to be open
```

```

19506 - Nessus Scan Information

Synopsis

This plugin displays information about the Nessus scan.

Description

This plugin displays, for each tested host, information about the scan itself :

- The version of the plugin set.
- The type of scanner (Nessus or Nessus Home).
- The version of the Nessus Engine.
- The port scanner(s) used.
- The port range scanned.
- The ping round trip time
- Whether credentialed or third-party patch management checks are possible.
- Whether the display of superseded patches is enabled
- The date of the scan.
- The duration of the scan.
- The number of hosts scanned in parallel.
- The number of checks done in parallel.

110723 - Target Credential Status by Authentication Protocol - No Credentials Provided

Synopsis

Nessus was able to find common ports used for local checks, however, no credentials were provided in the scan policy.

Description

Nessus was not able to successfully authenticate directly to the remote target on an available authentication protocol. Nessus was able to connect to the remote port and identify that the service running on the port supports an authentication protocol, but Nessus failed to authenticate to the remote service using the provided credentials. There may have been a protocol failure that prevented authentication from being attempted or all of the provided credentials for the authentication protocol may be invalid. See plugin output for error details.

Please note the following :

- This plugin reports per protocol, so it is possible for valid credentials to be provided for one protocol and not another. For example, authentication may succeed via SSH but fail via SMB, while no credentials were provided for an available SNMP service.

- Providing valid credentials for all available authentication protocols may improve scan coverage, but the value of successful authentication for a given protocol may vary from target to target depending upon what data (if any) is gathered from the target via that protocol. For example, successful authentication via SSH is more valuable for Linux targets than for Windows targets, and likewise successful authentication via SMB is more valuable for Windows targets than for Linux targets.
