20 days ago

In the discussion forum, there have been multiple arguments, some of the authors have argued Abi need not provide all of the findings while others have suggested full disclosure of the information that has been accumulated during the phase of research.

ACM and BCS and statistical institute outline that Abi should be providing all the data accumulated and also should provide disclaimers wherever possible.

According to European and UK law, the manufacturer can-not display incorrect information over their website or product which may cause health damages to the consumers.

Although the research has been sponsored by the manufacturer, it is the job of the researcher to provide accurate findings so that the manufacturer may alter their product composition for a better outcome. This will also save the manufacturer as well as the researcher from any future lawsuits.

Thus, in conclusion, Abi should provide all his research details to the employer and should provide his findings and suggestions which will help the manufacturer with insight into their product.
